Anaconda Search will allow
you to: search your entire
disk for files or specific

content using regex expressions. search your entire collection using regex expressions as well as Lucene Query Syntax. index search content into a full-text index and make it searchable. You can use Anaconda Search as follows: Open the Anaconda Navigator icon at the upper right corner of the anaconda prompt. Type in the following commands:

```
conda search search-anaconda.
```

Here is your Anaconda Search result:

Learning Why Use Anaconda
+ Jupyter Notebook for
Data Science? Hope this
helps! For any doubt or
need clarification, let me
know in the comments
section. Happy Learning!
The onset of puberty in
girls is associated with
rapid brain changes in
white matter

microstructure. We studied how white matter (WM) microstructure changes over time during puberty. In a longitudinal study, the diffusion-weighted and T2*-weighted images of 72 female subjects were obtained in three sessions: at 8, 10 and 12 years of age. Fractional anisotropy (FA) and mean diffusivity (MD) were calculated within WM pathways. Sexual maturation was assessed by the self-reported Tanner

scale. Magnetic resonance imaging data was successfully analyzed for 33 subjects at each session. A region of interest was selected within the right arcuate fasciculus and the right cingulum and analysis was conducted for tracts in the right hemisphere. We found an increase in FA and a decrease in MD that was higher for the cingulum than for the arcuate fasciculus. The differences between the

tracts were significant and the tractual anisotropy was always higher at 10 and 12 years of age. The maturation index of the WM microstructure in girls correlated with their Tanner stage, the maturation of the left cingulum was significantly higher than right cingulum. The onset of puberty is associated with a change in the WM microstructure.Q: Can anyone give me some hints

to classify that two
families are

And if i want to search
just the word solucionario
ecuacionesdiferencialesden
nieszill6edicion i do it
the following way, right?

```
search = input("Search: ")  
with open("result.txt",  
"r") as f: print(f.read().  
splitlines()[1:]) result =  
re.search(search,  
f.read()) if result:  
print(result.group())
```

EDIT: If i do this, i can
eliminate all the word

apart from the one i'm
looking for with
`open("result.txt", "r") as
f: results = list(f.read()
.splitlines()) search =
input("Search: ") results
= [i for i in results if i
.split()[-1].lower()==sear
ch.lower()] for i in
results: print(i)` I'm not
sure if this is the best
way to do it, i need more
clarifications about how
to do this. A: Just use
`list.index()` for that: `for
line in result: if line.lo
wer().startswith('solucion`

```
arioecucionesdiferencialesdenniszill6edicion'): print(line[len('solucionarioecucionesdiferencialesdenniszill6edicion'):] )
```

Verizon Wireless wants you to 'be the spark' this Christmas The Associated Press Published 11:30 pm EST, Friday, November 30, 2015 In this Jan. 14, 2013, file photo, a Verizon employee places a calling card on a SIM card inside a phone at a Verizon Wireless store in El Cajon, Calif. Verizon

is reminding customers to
be the 'spark' this holiday
season, and not the
'tree.' less In this Jan.
